Introduction

Background on macroeconomic conditions

Inflation

Inflation drivers across many different goods and services

Inflation data from multiple countries

Producer Price Index and Consumer Price Index data

Predictions for inflation over the next 5-10 years

Recession

USA enters recession with negative GDP growth

Mixed results in other countries

How Inflation will lead to Recession--globally

Previous Recessions: Impact on Mobile Deployment

1974 example of high inflation and recession

2000-2001 example of a tech-focused downturn

2008 example of a recession based on debt problems

How each of these cases provide guidance into today's issues

The Impact on Consumer Behavior

Prior recessions and their guidance on the impact on mobile demand

Private wireless networks and the outlook in recessionary conditions

The Impact on CAPEX for Operators

How inflation/interest rates may affect CAPEX budgets by the operators

Policy choices related to interest rates will be key

Summaries of how much debt is carried by various operators

Conclusions

The likely outlook for mobile data demand and private network demand

Possible changes in CAPEX budgets based on interest rate changes

Adjustments to Mobile Experts forecasts
